

CENTRE FOR RENEWABLE &
SUSTAINABLE ENERGY STUDIES

Solar Thermal Energy Systems

DATE	28 March – 1 April 2022
VENUE	Engineering Faculty, Stellenbosch University
ACCREDITATION	Certificate of attendance (4 CPD points) REGISTER HERE Certificate of completion (4 CPD points) REGISTER HERE 15 academic credits at NQF 8 or 9 level REGISTER HERE
DEADLINE	Certificate course registration closes 14 calendar days before the course starts. The number of attendees is limited. Bookings will be taken on a first come, first served basis. For academic module registration deadlines, please contact the relevant academic programme coordinator.

PRESENTER

Prof Craig McGregor is an Associate Professor at Stellenbosch University in the Department of Mechanical and Mechatronic Engineering. He is a published author and spent 20 years in the energy industry before joining the university. He has received several awards, including the Bill Neal-May Gold Medal from the SA Institute of Chemical Engineering for outstanding achievement in process technology.

Synopsis

This module deals with the collection of solar radiation and its conversion to heat that can be either used for industrial purposes or to drive a turbine to generate electricity. Low temperature and high temperature solar thermal technologies are covered, along with the concentrating optics systems necessary to generate high temperature, and thermal energy storage. The module culminates in the simulation and design of feasible solar thermal systems.

The main elements of the course are listed below:

- Solar radiation and the measurement of solar resources
- Thermodynamics, heat transfer and fluid mechanics as applicable to solar thermal
- Basic principles of solar radiation optics
- Principles of thermal energy storage and Carnot batteries
- Applications of solar thermal for domestic hot water, process heating and electricity generation
- Parabolic trough, linear Fresnel and power tower (central receiver) CSP systems
- Design of solar thermal energy conversion systems
- Operating strategies and economics of CSP systems

Qualification and accreditation

The module is accredited for a variety of outcomes, depending on what the attendee registers for. Module contact time (40 hours) are shared by all attendees, but additional assessments, assignments, and projects will be specific to the outcome that the attendee registered for.

- The module is accredited for ECSA Continuous Professional Development (CPD) credits, and attendees can obtain a certificate of attendance (if all lectures have been attended) or competence (if all lectures have been attended and various assessments have been successfully passed).
- The module is also accredited for 15 academic credits at both NQF8 level (Post-graduate diploma) and NQF9 level (Masters), as part of various [academic programmes](#). This requires a total time investment of 150 hours.

Delivery Model

- The module will be delivered over five days. Pre- and post-module assignments and projects are applicable depending on the outcome the attendee registered for.
- A blended classroom/online model will be followed, with students being offered the options to attend in person (covid dependent), online only, or a mixture of these.

Who should attend

Engineers, technologists and technicians active in the energy sector. Government and local authority officials. Architects, planners and developers. Investors. Academic students.

Travel and Accommodation

All travel and accommodation arrangements are the attendee's own responsibility.

Prerequisites

Certificate of attendance: none

Certificate of competence / Post-graduate diploma at NQF8: NQF7 engineering qualification

Masters at NQF9: NQF8 engineering qualification

IT infrastructure: For online attendees, adequate internet connectivity to connect reliably via Teams for the duration of the module. For Certificate of competence, Diploma and Masters attendees, a computer capable of running Windows 10 with user rights to install new software.

Module Fees

- The standard fee for the five-day module is:
- **R12 000 for a certificate of attendance**, and
- **R14 000 for a certificate of competence**. Please refer to the University's latest study cost information for academic fees.
- Cancellations made up to 21 days before the module starts will be subject to a 15% handling fee. No refunds will be made after this date; however, substitutions will be accepted.
- Payment is mandatory for attendance.
- In the case of unforeseen circumstances, Stellenbosch University reserves the right to cancel the module or change the presenter/s, in which case all fees will be reimbursed in full on request.
