The committed pipeline is 1.7 GW and has successfully completed construction & financing of 1.2 GW solar portfolio.

We are seeking an experienced PM who has implemented utility-scale Solar PV development projects in the REIPPPP.

Work Schedule: From 9:00 to 18:00, overtime possible
Additional compensations: Annual bonus, compensation for travel expenses

Travel: Possibility of business trips (Africa, EU, Russia) frequency up to 3-5 times a month

Languages expected: English (fluent/native), Afrikaans (desirable), Russian (desirable)

Computer Skills: Advanced User
- MS Word;
- MS Excel;
- MS Outlook;
- MS Project;
- AutoCAD (preferable)

Mandatory requirements:
High level of organizational and management skills.
Understanding and knowledge of development process in SA from "green field" to "ready-to-build".
Strong experience in the processes of utility-scale energy projects (Solar PV) turn-key implementation.
Strong skills in contractual procedures: procurement, service agreements, etc.

Understanding of the PV plants and HV facilities construction technology.
Work experience on the side of EPC/Developer, participating in utility-scale PV projects in SA.

Main functional responsibilities:
Drawing up a detailed Project Schedule;

Assistance in drawing up a procurement plan;
Interaction with local suppliers and contractors;
Participation in preparation of documents for participation in tenders (REIPPPP, private PPA's);
Preparation and approval of contracts with contractors and internal departments;
Participation in obtaining permits and approvals in accordance with SA law;
Monitoring the execution of contracts;
Participation in the management of expenditures of funds for projects in accordance with the approved budgets, making adjustments to the budget if necessary;
Forecasting the implementation of the Project schedule and updating;
Control over the provision of primary documentation by counterparties and the organization of subsequent document flow with external and internal counterparties;
Organization of the process of transferring customer-supplied equipment and materials;
Initiation and control of claim work within the framework of the execution of contracts;
Organization of the commissioning of the facility, including participation in commissions and obtaining the necessary positive opinions from the regulatory authorities;
Conducting business correspondence with contractors as part of the project
Formation of interim and final reports on projects;
Fulfilment of other orders of the Director in the framework of project implementation.
Participation in potential projects sites visits;
Assistance (technical assistance, coordination) in new projects acquisition processes;
Assistance in project portfolio extension.
Assistance in PV modules assemble line local organization.
