Temporary job opportunity for a Junior Energy Analyst

NOA is a young and innovative business in the renewable energy space; We are looking for a recent engineering graduate (any discipline) to help us solve a variety of challenging business problems. Detailed knowledge and experience in the energy space is **not** required: many of the problems have a technical component, but structured thinking and analytical ability is far more important than technical experience in this role

The ideal candidate:

- ... is a self-motivated individual with a can-do attitude to problem solving;
- ... is comfortable with analytical problem solving on Excel;
- ... can do detailed analysis, but can also generate quick, rough estimates when required;
- ... is familiar with PowerPoint;
- ... can assist with simple pieces of software development (although this is not the primary role);

We can offer the following:

- This will initially be a fixed term contract (3 months);
- We are offering a monthly fee of R20,000;
- NOA has offices in Stellenbosch, but while some “office time” is required, working from home is also an option;
- The selected candidate will work closely with company founders to help change the face of the South African energy industry!
- This is a great opportunity to gain experience in a fast growing start-up, in one of the most critical (and exciting) sectors in South Africa.
